Compliance & reporting

Strengthen climate reporting and compliance

Build a climate insights foundation that supports disclosure consistency, supports earlier decisions, and holds up as standards evolve.

Limited traceability under scrutiny

As regulatory and stakeholder expectations for sustainability and climate disclosures continue to change, most organisations still struggle with:

Fragmented records across regions and functions create conflicting figures and narratives.

Manual reporting cycles that can't keep pace with shifting standards and stakeholder demands.

Showing the basis, method, and changes over time when auditors, boards, or regulators probe.

A single climate risk insights foundation

The RDS Platform standardises asset and location information into a single system of record for business-wide risk visibility and reporting that enables teams to:

- Maintain a consistent "digital twin"-type baseline for locations, assets, and risk attributes used in disclosures.
- Enhance that baseline with climate risk insights, impact analysis, and prioritised actions using Swiss Re models and engineering expertise.
- Version and compare results across reporting periods, with an audit trail of inputs, assumptions, and outputs.
- Share ready-to-use standardised outputs to support collaboration without losing governance.

Compliance & reporting

Value delivered

Stronger assurance

Powerful insights to support regulatory reporting (e.g. EU-Taxonomy).

Lower disclosure risk

Fewer last-mile reconciliations and fewer unsupported statements.

Shorter reporting cycles

Reduced manual work by replacing scattered files with a governed baseline.

Clearer leadership direction

Portfolio-level insight supports investment decision-making.

What customers achieve

Bank:
Increased confidence in assessing physical risks.

Real estate investment firm:
Support of decision making for reporting purposes.

Small/medium enterprise:
Streamlined EU-Taxonomy insights reporting and strengthened stakeholder trust.

Make disclosures efficient

Request a demo to see how RDS systematises site and asset risk inputs, tracks change over time, and supports consistent sustainability reporting.
