

Your business. Your location. They're important.

Your business is unique. And so are hurricanes. A storm category is not the only predictor of what's to come. How compact or expansive is the hurricane? And how close are you relative to its center? Both factors play a role in determining impact.

Bottom line: in a hurricane, storm size and where you are matter.

Category 5
60 mph

Category 2
100 mph

If the location is right near the center of a **category 2 hurricane**, sustained winds are likely to exceed **100 miles per hour**.

Windspeed and location

A category 2 hurricane passing right over your location can produce higher wind speeds than a category 5 passing at 30 miles away. With your location(s) at its core, our parametric STORM™ product tailors coverage specifically to you and your business.

Scenario 1

30 miles away from the center of a category 5

Sustained winds

60 mph

policy not triggered

Scenario 2

Near the center of a category 2

Sustained winds

100 mph

policy triggered ✓
