

Climate Risk Services for Captives

We empower captive owners to understand, manage, and mitigate risk with future looking data, platform services, and adaptation insights

We support captive owners and risk managers to quantify and manage complex risk related to natural catastrophes:

Global Natural Catastrophe and Climate Risk Assessment

- Manage natural catastrophe and climate risk to your assets (PD) and operations (BI) across a portfolio of assets for perils such as flood, windstorm, or wildfire.
- Identify the high-risk locations which may not always be the high-value assets.
- Gain insights into emerging risks such as drought and heat for different climate change scenarios.
- Benchmark and optimize your risk transfer with Swiss Re's modelled loss insights.
- Address non-asset-related impacts such as workforce loss through expert insights.

Identify opportunities for investing into risk mitigation measures together with our risk professionals

- Compare different risk mitigation measures through a cost-benefit analysis.
- Assess the ROI of resilience investments.
- Leverage risk engineering expertise to manage high-frequency and thus captive-relevant events.

Support your parent company with risk insights

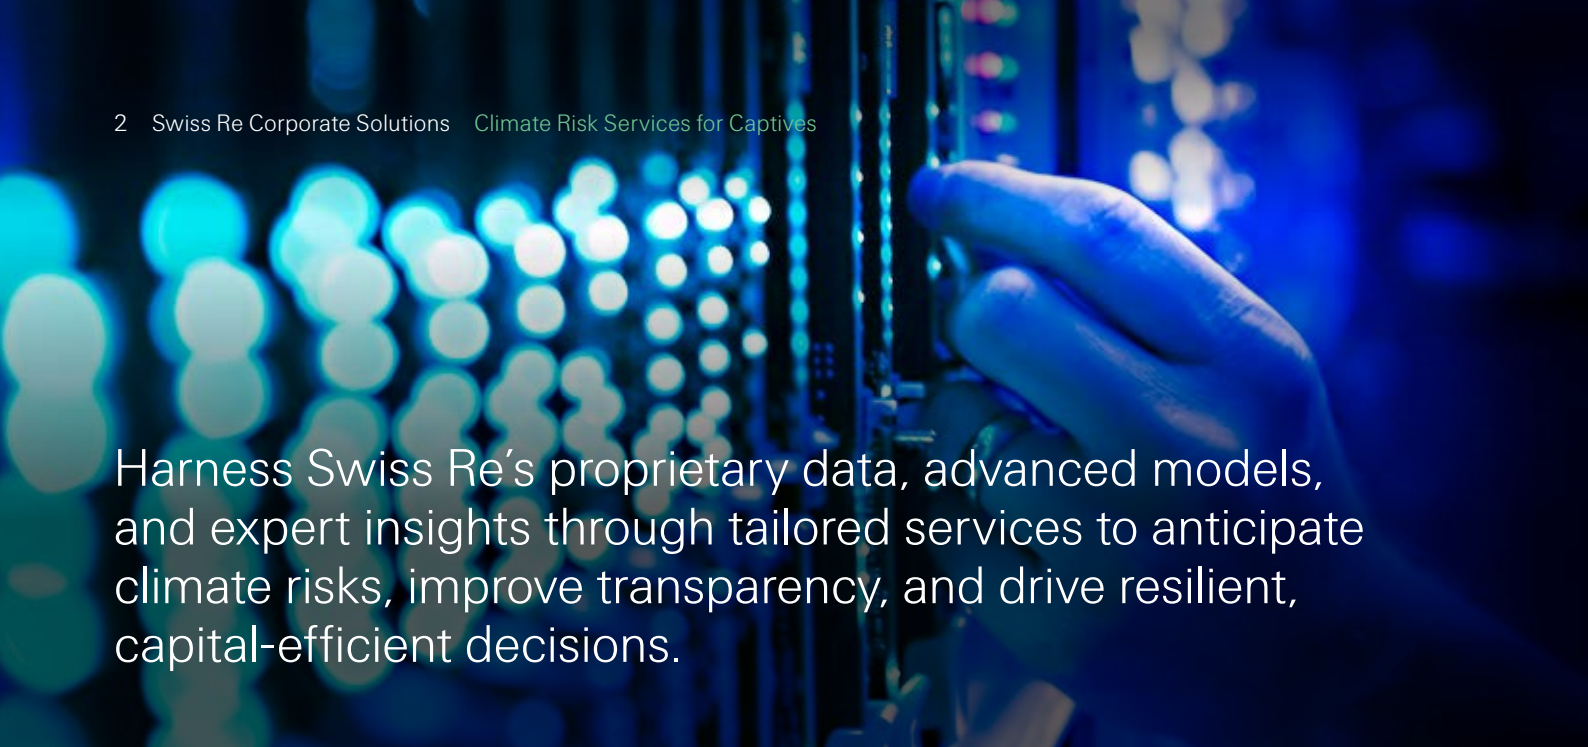

- Consult with risk data on the Swiss Re's RDS platform to support manager's due diligence on new locations or strategic projects.
- Create a risk management framework and improve processes fostering risk dialogue with senior management.
- Provide scenario outputs that help the risk manager validate risk maps, risk appetite boundaries or ORSA-related discussions, with the risk manager fully owning the process

Enable your risk professionals with data and platform solutions

- Equip your risk professionals with state-of-the-art risk data and interactive platform solutions for independent management of risk data including API availability.
- Build a digital twin of your assets by integrating all available site data.

“Swiss Re team listens and is highly educational, covering the full range of climate issues.”

Lactalis-Nestlé

Harness Swiss Re's proprietary data, advanced models, and expert insights through tailored services to anticipate climate risks, improve transparency, and drive resilient, capital-efficient decisions.

Your key benefits:
